I think it is an important step for long term management. Especially in the southern region of the state where temperature soar. Due to decreased snow pack and increased demand, water will be low. I think it is a healthy move and there right move.

I think the biologists are doing a good job at trying to be more proactive with our deer herds. I think a lot of these cuts are aggressive and needed for the conditions we are in currently. The one unit I would encourage a slightly higher tag cut is the Pine Valley down to 3900 for a total of 600 tag cut instead of 400 our fawn survival this year on is very concerning and I think we need a to be a little more proactive aggression so we don't have larger dip in buck numbers in 3-4 years.

Do you have any additional comments about the buck deer permit recommendations?

I have said this before. There are not 10,000 deer on the Beaver unit. Until you are willing to spit out a more accurate number of herd size you can never fix the problem. Cutting tags is a step, but you are still allowing 1400 hunters in the field to chase very few bucks. You can never recover this unit without taking more progressive steps at this point. Antler restrictions, less days to hunt, very limited amount of hunters more like the Dutton or in my opinion it needs to be shut down for a few years, and then opened back up very slowly. I have hunted this unit for 40+ years. This is not about me, but it is about have my kids and grandkids enjoy the art of hunting and being able to see a buck every now and again. I have watch the last 10 years continue to drop in numbers. I went and hiked the mountains where hundreds of deer winter on the East side of the Beaver. Two groups of about 10 doe in a large area. How can you come up with a 10,000 deer figure. I know where the deer winter. I know where the deer hang out during every season of the year. There is not even close to that 10,000 number. You will have to do even more in order to ever have a chance of bring this herd back on the Beaver.

Which best describes your position regarding the antlerless permit recommendations?

Strongly disagree

Do you have any additional comments about the antlerless permit recommendations?

On the Zion unit you have 18,000 deer but 0 doe tags, yet on the Beaver unit 10,000 deer and the Panguitch Lake 10,000 deer and Dutton 2200 deer, you are taking 10 doe on each of those units. I do not understand any kind of sense as to why we sit and watch the herd decline at a fast pace and yet we add to the problem by taking a few more out of the herd. Everyone says they are concerned about the number of deer in these units. I did not know that shooting more deer helps the herd grow. Maybe we should really help the deer herd bounce back by taking out 100 doe in each of these units. I would hope common sense could prevail here.

Which best describes your position regarding the buck deer permit recommendations?

Neither agree nor disagree

Do you have any additional comments about the buck deer permit recommendations?

i would like to give my feedback my opinion is that as a resident we should have first dibs on the permits and when us residents have all drawn a permit then let the non residents have there draw its very frustrating living in the state that you put in for dont draw a tag and go out during the hunt and see someone from nevada or california or any other state that has permits. i pay taxes here and live here and should have the first pick on permits pretty sure its all about the mighty dollar. so i recommend residents first on permits

When are you guys going to realize you have lost your deer heard? Unless you do something drastic what little deer you have left will be gone. I saw one little buck on the hunt last year and that was it. Your buck doe ratio has no impact on your heard. If you shoot DOE YOUR DEER HEARD DECREASES. you've shot to many doe for years and now you have no deer. Your deer permits will keep going down like they have over the last 30 years, unless you quit shooting doe. You've haven't managed the deer properly for years. Now you have to raise fees to make money. I could fix your deer heard but it would take me 8 to 10 years to undo the damage you have caused over the last 30 to 40 years.

Cutting tags is not working, why can't you try some else, like going to 3 point or better, 5 day hunt on muzzle and rifle, cut days on archery. No Doe Tags, try it for a few years, this way you don't have to cut tags. Try this on the Beaver and MT Dutton unit.

Which best describes your position regarding the buck deer permit recommendations? Strongly agree

Do you have any additional comments about the buck deer permit recommendations? I agree with lowering the tags in the southern region, although I hunt the Zion unit, I would like to see less tags for a few years, let the bucks mature and grow.

I strongly disagree with your dear Count for example the winter spring range at the big meadow south of Kanash used to have hundreds of deer now the past 10 years there is not one deer there the bench between Summit and Cedar City had a lot of deer now you don't see one deer the Buckhorn bench east side from Highway 20 to Cottonwood Canyon used to be a highway of deer every morning migrating back to the Cedars now you don't see one deer I have rode that after a snowstorm several times, this year and last year, and you don't see one deer track the Buckhorn bench west side north of the dairy on the cane Spring Road had a lot of deer this year and last year I may have counted six The southwest desert south of Wilson Canyon north west of Beryl had a hillside full of deer in the winter now there's not one deer, you need to go back to the old timers who used to do the counts and have them go there now the 5000 or so permit your cutting back is not nearly enough you need to do something more drastic now before it's too late don't destroy our deer heard. I have the time and, I am out in the outdoors most all the time and I can see a big drop in our animals and it's a big problem. Jay Guymon

Which best describes your position regarding the buck deer permit recommendations?

Somewhat disagree

Do you have any additional comments about the buck deer permit recommendations?

I've hunted the southern unit for 16+ years. The quality and quantity has decreased exponentially. The amount of pressure from "stacked" hunts along with poor conditions has been evident. Please consider antler point restrictions and possible closers (2-5 year) for critical areas. There is too much pressure on the herd for such poor conditions. Stop stacking hunts. The season is already short. Having to deal with hunters of other species makes it very frustrating.

Which best describes your position regarding the buck deer permit recommendations?

Strongly disagree

Do you have any additional comments about the buck deer permit recommendations?

The Division has failed the deer herd and the deer hunters of this state. The deer hunters are not the problem yet you continue to blame them by reducing buck deer tags even though buck deer hunting don't affect the deer herd growth.

We are tired of reduced tags and restricted hunt areas and never receiving the promised deer population growth, You continue to micro manage the hunters and seemingly ignore the status of the deer herd. Utah used to harvest as many bucks as we are now giving out tags for. This is a failure of epic proportions and a course correction is needed.

Your continued reduction of tags and reducing the size of the hunt areas shows your focus on buck to doe ratios and micro managing the hunters when you should be focused on what is killing the does and the fawns

The problem is the reducing number of does that are in the herd. The only way a herd can grow is if there are Does to be bred. You need to shift your focus off of the hunter and the buck to doe ratio and focus on what is killing the does. Take the resources currently used micromanaging the hunters and use it to figure out why the deer population isn't increasing.

There is something else restricting the deer population besides the weather and the buck deer hunters and you need to focus on the deer herd and find out what it is. For over 20 years you continue to blame the hunter (by reducing tags and hunt area) and the weather. It is time to admit your failure and make a course correction.

Buck deer hunting does not keep the population of deer from expanding yet your response to less deer is to cut buck tags and restrict hunt area size and ignore everything else. Ten years ago we hunters agreed to smaller hunt areas and reduced tags with the promise the deer herd would increase. The division has failed and the deer herd and the deer hunters are the ones who are paying the price of that failure.

Give out more tags (increase revenue) , increase the hunt areas size (let hunters disperse themselves and reduced your costs) and allow buck deer tags to take a bear or cougar and spend more time on figuring out what is killing does and fawns.

I have lived and hunted Southern Utah my whole life, mainly the Zion, Panguitch Lake, and Paunsugant and over the last couple of year with the drought and other factors, I have seen a noticeable drop in Buck numbers on all 3 units and also in quality. I am in strong support of the new ban on baiting as I believe this will help the buck numbers out and I agree that tag numbers need to be cut to help restore the deer heard back to previous levels. I appreciate the work done by all of those at the Division to help preserve and prosper Utah's deer herds. Thank you!

Which best describes your position regarding the buck deer permit recommendations?

Somewhat agree

Do you have any additional comments about the buck deer permit recommendations?

First thing, How do we know drought was the main reason for the decline in overall buck harvest as Covy states? Couldn't it have been just as much from mismanagement of predator populations, overharvesting of doe populations, and overharvest of buck populations during those years that populations seemed to be doing great? I feel like these cuts are warranted in these areas in the southern region but local hunters and sportsman's have been calling for the division to do something about the declining populations in these areas for the last 5+ years in which the divisions common response has been that according to our data sets these populations are fine and the deer are just hiding. In my opinion, the inflated numbers of antlerless harvest over the last 5-8 years and maintaining a reactive approach to predator management in lion and bear harvest have had way more to do with the mule deer decline in the southern region than drought.

Which best describes your position regarding the antlerless permit recommendations?

Somewhat agree

Do you have any additional comments about the antlerless permit recommendations?

Its weird how the ramping up in antlerless deer permits coincide with decrease in populations... I attend racs and listen to as many as I can and have heard a number of local sportman's in the southern region ask to not harvest so many does because areas are not doing well and populations have been declining for years. The only reason I somewhat agree is because the division has FINALLY caught up to what the people that actually spend time in the field and have a better understanding of historic populations and where they are at now have been trying to say for years. I really feel that the higher ups in the division right now have a belief that they know more than the general public and pass over any information that is brought to them if it go against their narrative. It would be nice if these "deer committees" were based more around local knowledge and less around who the division wants in them. As well as being more transparent with who is on the committee and how they were selected and the qualifications of each person on the committee.

Deer are hunted too many days during the year. You should strongly consider shortening the archery season. Why does the group that gets to hunt first, need a season three times longer than the others? Start it a week later and end it as scheduled. This would also be better from the standpoint of hotter weather and greater likelihood of spoiled meat.

How about doing away with the Lifetime Hunting license issued in 1993. This would also serve to even the drawing field for all applicants. How many lifetime mule deer permits will be issued for the year 2021?

Which best describes your position regarding the buck deer permit recommendations?

Neither agree nor disagree

Do you have any additional comments about the buck deer permit recommendations?

Hello, I know that there is a lot that goes into our mule deer herd. Drought, habitat, predators, road kill, etc.

I've seen a dramatic change in mule deer numbers in my area in the last 30 years. We've having a war on coyotes and now lions, which will always help, in which I hunt quite a bit for coyotes. In my area (Wayne county) we take far too many does and fawns in debridation permits!!! I know land owners take a loss, but mule deer have been native here for thousands of years. It's the land owners choice to own the land and where it's at. They can fence them out!! They can apply for about every government subsidy there is, they can find money for a fence. Also road kill takes so many fawns and does. We need to find a way to help keep them off highway. Sorry for miss spellings!! Shane Durfey

Which best describes your position regarding the bull elk and pronghorn permit recommendations?

Neither agree nor disagree

Do you have any additional comments about the bull elk and pronghorn permit recommendations?

We need to quit letting bow hunters on spike units take cow elk !! They get first chance at everything and the longest time to (hunt!) Quit letting them take cows. My elk heard on Boulder unit has had dramatic decline. And land owners, if there not in there property doing damage they shouldn't get a 2 mile buffer for debridation tags!! And not so many at that!! Fence them out!! They get all the government subsidy they can find money for fencing! Shane Durfey

Do you have any additional comments about the buck deer permit recommendations?

Quality and quantity do matter. However the data provided glossed over that in the 90's in southern Utah, one could drive a 10 mile stretch of mountain road and see several groups of deer with a quality buck (group of 5-10 does to 1 breeding buck) and likely a none breeding buck or two in the mix or in between herds. in the current times the same person can drive 20 miles and maybe see a deer. Need to look harder at what was done in the 80's to fix the mess we are in now. Just because some one wants to hunt doesn't mean they have to hunt. Do right for the herd, even if it restricts the DWR's pocket book and limits the number of hunters.

As a side note. the Hunt expo is BS. The DWR is making hunting a RICH PERSONS GAME and catering to the northern Utah/Out of state folks. Make it fair. Move it around the State and make everyone have a fair shake at applying. I have to pay \$70 dollars in fuel and spend a full day to sign up in person to apply. Your average Utah hunter has the same issue. That's money I could spend on chances to hunt.

Additionally, while I am on a rant, make it to where Utah hunters can apply for more than just one limited entry species! You don't have to increase the tag numbers, to increase the \$'s the DWR would bring in from allowing Utah hunters to have more chances to draw.

Which best describes your position regarding the bull elk and pronghorn permit recommendations?

Strongly disagree

Do you have any additional comments about the bull elk and pronghorn permit recommendations?

Although age and antler size are good indicators for the bull herd, Bull to cow ratios are critical for the total population. There needs to be a balance between grooming for quality animals and quantity of animals. The division is wrong in their approach and rational for the decline, drought and habitat are factors in the problem, but over issuance of cow tags, catering to the "cow boys" and declining numbers of bull to cow ratio is the major contributors.

There is a very strong need to separate the Dutton, Boulder and Monroe units. Management of these quality units needs to occur at a summer/fall range usage. Most of these animals winter on the Dutton and get slaughtered in the cow hunts resulting in less yearling/two year old animals to sustain numbers for future. I have hunted elk on the Boulder for 20 years, I gave up cow hunting when it became harder than spike hunting due to low numbers (shortly after the Dutton and quota's for 1200 cows, the boulder at 600 cows).

This last spike season I observed 60 bulls, all 3 point or larger and 20 cows. NO SPIKES. 13 of the large bulls were sparing for rights to 6 cows. BULL TO COW NUMBERS MATTER, FIX IT!

Habitat matters as well, the "Cow Boys" don't care about any thing but making fat and padding pockets. Find a way to encourage them come to the table and support affirmative action! help improve the forage and support improvements for both. There is plenty of suitable land if it can be improved and maintained. Sure they may have to rest for a year or two, but in the long run they will have improved forage and possibly increased numbers. WELFARE RANCHING NEEDS TO BE CHECKED.

There is a super strong need to increase fuels reduction, understory management and control domestic grazing in efforts to reduce undesired wildfire effects on the landscape. Understory vegetation management and prescribed fires are the path forward to increasing habitat and increasing range capabilities for all ungulates.

The DWR can put the same effort into elk as deer, were are the studies, collars and tracking for elk similar to deer?

I have participated in winter Elk counts! should be chance sittings! Utah herds and hunters deserve better management.

The saying I grew up with was "if Utah doesn't want a Gang or drug problem, Assign them to the DWR, They will wipe it out in no time". Still holds true to day!

Which best describes your position regarding the buck deer permit recommendations? Strongly agree

Do you have any additional comments about the buck deer permit recommendations?

I appreciate the Division's response to the Drought and Predation on our deer. I would also like to share concerns on coyote issues along the areas of urban development. From Logan, Nephi to Kamas I see lots of coyotes in and around cities and would invite the Division and Wildlife Services to help deer in and around those areas to bolster the deer in units that seems to have high winter die off. I would also like to bring up unit 4/5/6. This unit has only 17% public land yet year after year 9k tags are issued for this unit. With the amount of Public land and being two access points to the major area it is overwhelming the amount of people to the amount of deer on that portion that is public. I ask that we look at separating this unit into smaller public land tags. Also with the traffic from the general public with atv, utv, campers on those two access points (Farmington Canyon / Skyline Drive above Bountiful) it makes the amount of travel on that area dangerous and potential for conflicts.

Which best describes your position regarding the bull elk and pronghorn permit recommendations? Neither agree nor disagree

Do you have any additional comments about the bull elk and pronghorn permit recommendations?

PLEASE get rid of the Multi season tag for Elk to include all three season's. Die hard Rifle hunters who know little about elk in pre rut / summer behavior have ruined the Archery experience. I talk specifically on the North Slope / south slope elk herd. These elk move over the wyoming border or onto private when pressured and give ZERO chance to have any sort of success. I suggest having the multi season tag changed to Muzzy & rifle season's only as those who have a hunters choice tag have opportunity to hunt extended units.
